# FUNHOUSE

# ***RUDY'S FUNHOUSE RULES***

## ***OBJECT***

Take control of the FUNHOUSE from Rudy, the Dummy, by putting him to sleep. Put Rudy to sleep by advancing the FUNHOUSE clock to MIDNIGHT. Shots that advance the Clock are the Jet Bumpers, the Center Ramp, and the Wind Tunnel.

## ***MULTI-BALL™***

At 11:30, on the clock, a LOCK is enabled. Lock a ball and the clock will advance to 11:45. LOCK the next ball and the clock will advance to 12:00 putting Rudy to sleep. While Rudy is sleeping, shoot a ball into his OPEN MOUTH to start Multi-ball.

## ***MILLION PLUS***

While in Multi-ball, shoot the ball into the TRAP-DOOR for 2 MILLION points. The TRAP-DOOR will close. Shoot a ball around the Center Ramp to REOPEN the TRAP-DOOR for 3 Million points, 4 MILLION points etc..

## ***MYSTERY MIRROR***

There are 6 AWARDS on the MYSTERY MIRROR. Hitting Rudy in the jaw lights the AWARD LAMP. Hitting the WIND TUNNEL collects the value on the mirror. The value is changed by the JET BUMBERS.

## ***LEFT BALL SHOOTER***

The FUNHOUSE STEPS are lit by entering the MANHOLE to the RIGHT of the JET BUMBERS. Making the CENTER RAMP will divert the ball to the LEFT BALL SHOOTER.

## ***SKILL SHOT***

From the right plunger, shoot the ball BEHIND Rudy's head to collect Rudy's HIDEOUT BONUS.

# FUNHOUSE

## Object of the Game

### Object of the Game:

The object of the game is to move the time on the clock (A) to Midnight. At Midnight Rudy, the dummy, falls asleep and the player can amass large points by shooting into the "secret" trap door (B).

## FUNHOUSE

### Advancing the Clock

#### Advancing the Clock:

The clock is advanced in differing amounts of time by different playfield shots. The jet bumpers (C) award 0, 5, or 10 minutes depending if they are off, on, or flashing. The jet bumpers are lit on a single ball basis by the jet bumper lane at (D). The center ramp (E) advances the time in an incrementing single ball basis. The four S-T-E-P targets (F) advance the clock by 5 minutes on each hit. Falling into the wind tunnel (G) moves the clock by 15 minutes.

# FUNHOUSE

## Multi-ball™

### Multi-ball™:

Once the clock has been advanced to 11:30 a lock will light at (H). The player then locks a ball and the clock moves to 11:45. Another ball is served. The lock lights remain lit and another ball may be locked immediately. Once the second ball is locked the clock moves to 12:00 and the dummy falls asleep. Another ball is served and the player must shoot that ball into the dummy's open mouth! (J). The dummy then wakes up and spits out the ball thus starting Multi-ball™.

# FUNHOUSE

## Million Plus <sup>TM</sup>

### Million Plus <sup>TM</sup>:

At the start of multi-ball the secret trap door at (B) opens immediately. While in multi-ball the first shot into the trap door scores 2 million points. After the first shot into the trap the door closes. It can be re-opened by making the ramp shot at (E). The second shot into the trap door scores 3 million points. The third shot 4 million points etc. . If the player successfully scores a Million Plus shot and then loses 2 balls the trap door closes and a new starting time is set on the clock to restart the game sequence. If the player loses 2 balls before scoring a Million Plus shot, the trap door will close, and the lock light at (H) will come on. The player can then lock the remaining ball from multi-ball for a retry at Million Plus. The lock light is on a timer. If the player cannot lock the ball in time, or loses the ball, the game sets a new starting time on the clock for a return to normal game play.

# FUNHOUSE

## Right Side Plunger

### Right Side Plunger Skill Shot:

The right side plunger skill shot is made by carefully shooting the ball to drop behind the dummies head (K). This awards 250, 000 points for the first successfull attempt, 500, 000 points for the second, 750, 000 for the third etc.

# FUNHOUSE

## Left Side Plunger

### Left Side Plunger Skill Shot:

The left side plunger shoots the ball up onto the Crazy Steps (L). The left plunger is accessed by one of two methods. The first method is dropping the ball into the Manhole at (M). Once the ball has gone into the Manhole, the diverter on the center ramp will open, so that a center ramp shot takes the ball to the left plunger for a shot on the crazy steps. The second method is lighting the GATE OPEN feature on the Mystery Mirror (next page). Once the gate is opened by this feature either a ramp shot OR a left side drain will send the ball to the left side plunger. The individual values on the crazy steps are lit by completing the S-T-E-P targets (F) on the main playfield. The crazy steps awards are as follows: The lowest step (yellow light), opens the trap door to begin Funhouse Frenzy (page 8). The middle step (red light) lights the Extra Ball light at (N). The top step (green light) lights the Lock light at (H) for 500,000 points. If the player pulls the plunger all the way back and the ball goes down the long flight of steps then the Superdog bonus is lit (page 9). Once a feature is started in this fashion its lamp on the steps goes out. These are all one ball features such that they must be made on the same ball as the steps shot was made on (no memory).

# FUNHOUSE

## Mystery Mirror

### Mystery Mirror:

The Mystery Mirror is located over the entrance to the Wind Tunnel at (G). There are 6 values that can be awarded on the mirror. These include:

1. Light Extra Ball Shot
2. Light Million Shot
3. Start Quick Multi-ball
4. Start Superdog Bonus Timer
5. Light Jet Bumpers for Maximum Value

### 6. Open Left Side Plunger Gate

The blinking value that can be awarded is MOVED by the ball contacting the jet bumpers. The value is AWARDED when the lamp at (P) is lit. The LAMP is lit at game start. It is re-lit on a timer when the ball goes through the right outermost flipper return lane (Q). It is re-lit solidly on a hit to the dummys jaw (J). After all 6 values are awarded the lamp is lit so that on the next award the player receives 1 million points and the game starts SUPER-FUNHOUSE FRENZY.

# FUNHOUSE

## Funhouse Frenzy and Super Frenzy

**Funhouse Frenzy and Super Frenzy:** When Frenzy or Super Frenzy mode is entered from either the Crazy Steps (L), or by completing all 6 features on the Mystery Mirror (G), the player enters a timed super scoring period. During this period any scoring switch made on the playfield is worth a much larger point value than normal. This value is added into the players score at the end of the ball.

# FUNHOUSE

## Superdog Bonus Timer

### Superdog Bonus Timer:

Superdog Bonus Timer can be started from either the Crazy Steps or as a Mystery Mirror value. When in Superdog mode, the 3 Targets at (R) score 200,000 points on each subsequent hit.

# FUNHOUSE

## Gangway Bonus

### Gangway Bonus:

The current Gangway value is **SHOWN** in the lights at (S). The value is **COLLECTED** by the ball passing through the right inner flipper return lane (T) and then being shot up the Left Gangway (V). It can also be collected by the ball passing through the left flipper return lane (W) and then being shot up the Right Gangway (X). Every time the value is held from ball to ball until the player collects **EXTRA BALL**. Once an Extra Ball has been collected the value resets to the starting value at the start of all subsequent balls.

# FUNHOUSE

## Trap Door Bonus

### Trap Door Bonus:

During normal game play the inner loop at (Y) can open the trap Door for a points bonus. The first time a loop is completed with the left side flipper the door will open and the player has a set interval of time to enter the door. The first time is worth 250, 000 points. The next time the player must complete 2 loops, then 3 loops etc.. The points awarded are 500, 000 for 2 loops, 750, 000 for 3 loops etc..

## FUNHOUSE Bonus

**Bonus:**

The Bonus is based on the number of hits to the dummies jaw (J). The Bonus is held from ball to ball and is a game long accumulation that is awarded at the end of each ball.

Music/Speech ROM 4	27010	U18	Audio	A-5343-50003-4

### **NOTICE**

To order a replacement ROM from your authorized WILLIAMS ELECTRONICS GAMES distributor, specify: (1) part number (if available); (2) ROM label color; (3) ROM level (number) on the label; (4) which game the ROM is used in.

## CONNECTOR & COMPONENT IDENTIFICATION

Since FUNHOUSE uses WILLIAMS ELECTRONICS GAMES' WPC Electronics System, a new technique to identify connectors and other game components must be introduced. Each plug or jack receives a prefix number (which identifies the circuit board), a letter, and a number. J-designations refer to the male part of a connector. P-designations refer to the female part of a connector. For example, J101 designates jack 1 of board 1 (a Power Driver Board Board jack); P306 designates plug 6 of board 3 (a Display Driver Board plug). Identifying the specific pin number of a connector involves a hyphen, which separates the pin number from the plug or jack designation. For example, J101-3 refers to pin 3 of jack 1 on board 1.

Other game components may also have similar prefixes preceding their designator to clarify their locations or related circuit. For example, F501 refers to a fuse located on the Sound Board.

Prefix numbers for the WPC circuit boards are listed below.

- 1- Power Driver Board
- 2- CPU Board
- 3- Display Driver Board
- 4- Dual or Single Display Board
- 5- Sound Board

## CIRCUIT BOARDS

WPC Circuit Boards for FUNHOUSE are in the backbox. They are accessible by unlocking the Backbox lock, removing the Backbox glass, unlatching the Insert Board, and swinging it open.

The Display Driver Board is mounted on the interior side of the Speaker/Display Panel, below the Backbox glass in the Backbox. To access the Display Driver Board, unlock the Backbox, remove the Backbox glass, lift the Speaker/Display Panel, and lay it on the game cabinet.

Lamp circuit boards are mounted under the Playfield.

**CPU BOARD** The WPC CPU Board, p/n A-12742-50003, must be equipped with the ROM specified in the ROM Summary.

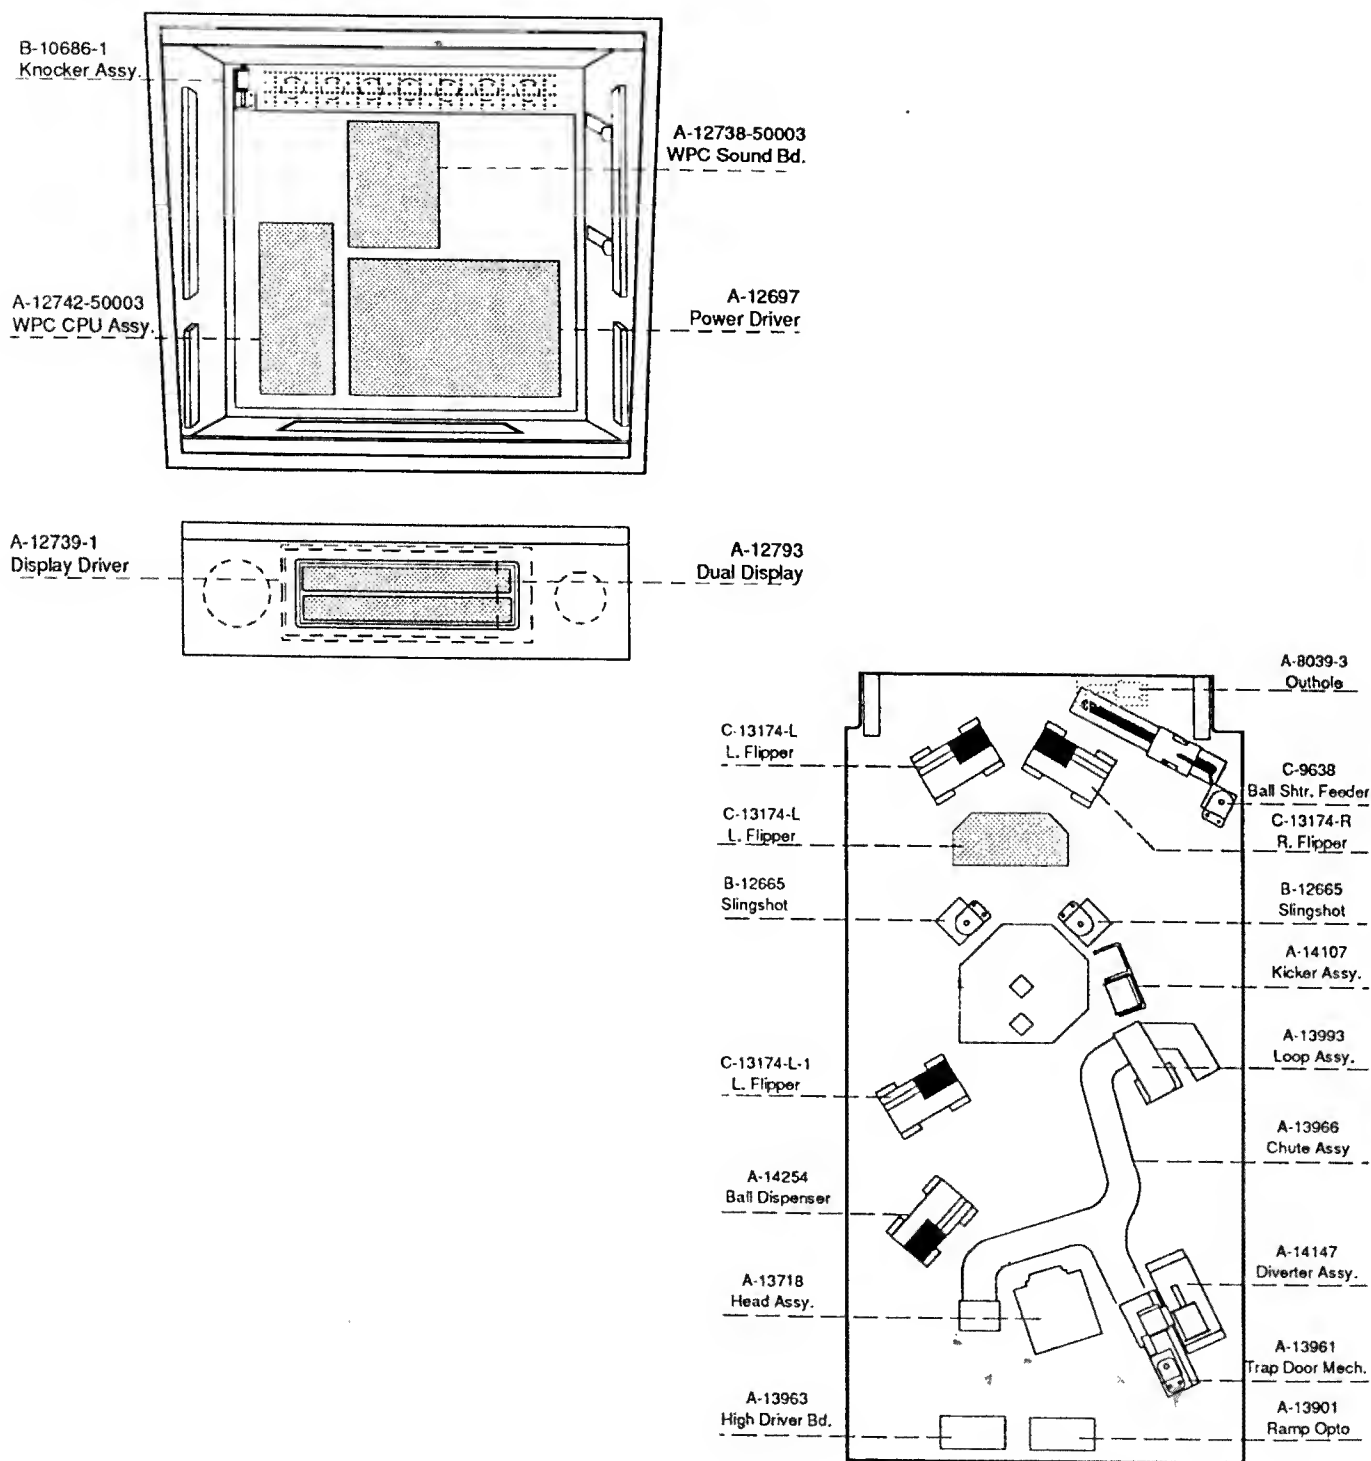

**SOUND BOARD** The Sound Board is p/n A-12738-50003, including ROMs and microprocessor.

**POWER DRIVER BOARD** The Power Driver Board is p/n A-12697.

**DISPLAY DRIVER BOARD** The Display Driver Board is p/n A-12739-1, -2, or -3. The dash number indicates whether an extended display is used, and if so, how many. No extended display = -1, one extended display = -2, two extended displays = -3.

**DUAL DISPLAY BOARD** The Dual Display Board is p/n A-12793.

Figure 1 shows the locations of these circuit boards, as well as other devices especially located to make FUNHOUSE a great game.

## FUNHOUSE GAME CONTROL LOCATIONS

### Cabinet Switches

The On-Off switch is on the bottom of the cabinet near the right front leg.

The Start Button is a pushbutton to the left of the coin door on the cabinet exterior. Press the Start button to begin a game, or during the diagnostic mode, to ask for HELP.

### Coin Door Switches

The operator controls all game adjustments, obtain bookkeeping information, and diagnose problems, using only four pushbutton switches mounted on the inside of the coin door. The Coin Door Switches have two modes of operation Normal Function and Test Function.

#### Normal Function

The Service Credits switch puts credits on the game that are not included in the game audits.

The Volume Up switch raises the sound level of the game. Press and hold the button until the desired level is reached.

The Volume Down switch lowers the sound level of the game. Press and hold the button until the desired level is reached.

The Begin Test switch starts the Menu System Operation and changes the Coin Door Switches from Normal Function to Test Function.

#### Test Function

The Escape switch allows you to get out of a menu selection or to return to the Attract Mode.

The Up switch allows you to cycle forward through the menu selections or adjustment choices.

The Down switch allows you to cycle backward through the menu selections or adjustment choices.

The Enter switch allows you to get into a menu selection or lock in an adjustment choice.

### Coin Door Switches

## PINBALL GAME ASSEMBLY INSTRUCTIONS

1. Open the shipping container; remove all cartons, parts, and other items, and set them aside.
2. Place the cabinet on a support and attach rear legs using leg bolts. Leg levellers and leg bolts are provided among the parts in the cash box.
3. Attach the front legs (after installing leg levellers), using leg bolts. See Figure 3 for details.

Figure 3. Pinball Assembly, Playfield Pitch Angle, and Leg Leveller Details.

4. Reach into the cabinet and backbox and ensure that the interconnecting cables are free to move (not kinked or pinched). Be careful to avoid damaging wires at any stage of the assembly process.
5. Raise the hinged backbox upright and latch it into position. Unlock the backbox, and remove the backbox glass, storing it carefully to avoid scratches. Remove the shipping block holding the Insert Board. Unlatch the Insert Board and open it; lift the Speaker/Display Panel and lay it on the playfield glass. This allows access to the bolt holes used for securing the backbox upright. Install the washer-head mounting bolts through the bottom holes of the backbox into the threaded fasteners in the cabinet to secure the backbox. Remount the Speaker/Display Panel; close the Insert Board and latch it in position. Reinstall the backbox glass, and lock the backbox.

**FAILURE TO INSTALL** the backbox mounting hardware properly can cause personal injury. **NEVER TRANSPORT** a pinball game with the hinged backbox erect. *Always* lower the backbox forward onto the playfield cabinet on a layer of protective material to prevent marring or damage and possible personal injury.

## GAME OPERATION

After assembly and installation at its site location, this game must be plugged into a properly grounded outlet to prevent shock hazard, and to assure proper game operation. DO NOT use a 'cheater' plug to defeat the ground pin on the line cord. DO NOT cut off the ground pin.

**POWERING UP.** Perform the following 'power up' routine upon completion of the assembly and installation procedure, as well as at the beginning of each period of game operation. Initially, it will confirm that the game is in proper operating condition; later, it will aid the operator via its messages (refer to later text entitled "Problem Analysis Messages").

**Procedure.** With the coin door closed, plug the game in, and switch it ON, using the On-Off switch. In normal operation, the top score display initially shows the last score. Then, the game goes into the Attract Mode (playfield and backbox lamps flashing, sounds being heard, etc., if the operator does not change the Factory Setting).

Open the coin door and press the BEGIN TEST switch to begin the game test routine. The top score display shows the game name, and the bottom score display shows the game number and game software revision. The message changes. The top score display shows the sound software revision, and the bottom score display shows the revision level of the system software and the date the game software was revised.

**FUNHOUSE**  
50003 Rev. P-6

**Sound Rev. L-1**  
SY. 0.90 11-5-90

Perform the entire test menu routine to verify that the game is operating satisfactorily (refer to later text entitled "Menu System Operation"). Successful completion of the tests shows that the game is ready to begin earning your investment return.

After the game has been on location for a period of time, the test routine may be preceded by messages concerning game problems. The text entitled 'Problem Analysis Messages' contains more details concerning messages displayed at each game turn-on.

**ATTRACT MODE\*.** Playfield and backbox lamps blink. The player score displays exhibit a series of messages informing the player concerning:

- A. Recent highest scores\*;
- B. A "custom message"  
("PLAY FUNHOUSE")\*;
- C. The score to achieve to obtain a Replay award\*;

These (or similar) displays reappear occasionally, accompanied by sounds and music, until a player initiates game play by inserting a coin or, when credits are available, pressing the Start button.

\* - operator-adjustable feature

**CREDIT POSTING.** Insert coin(s). A sound is heard for each coin, and the player score displays show the number of credits purchased. So long as the number of maximum allowable credits\* are *NOT* exceeded by coin purchase or high score, credits are posted correctly.

**STARTING A GAME.** Press the Start button once. A startup sound plays, and the Credit amount shown in the player score display decreases by one. The upper Player Score Display flashes 00 (until the first playfield switch is actuated), and the lower Player Score Display shows ball 1, except for 4-player games where the ball # shows in the individual player's display. Additional players may enter the game by pressing the Start button once for each player, before the end of play on the first ball.

**TILTS.** Actuating the Slam Tilt switch on the coin door inside the cabinet ends the current game; **FUNHOUSE** then proceeds to the Game Over Mode. With the third closure\* of the plumb bob tilt switch, the player loses the remaining play of that ball, but can complete the game.

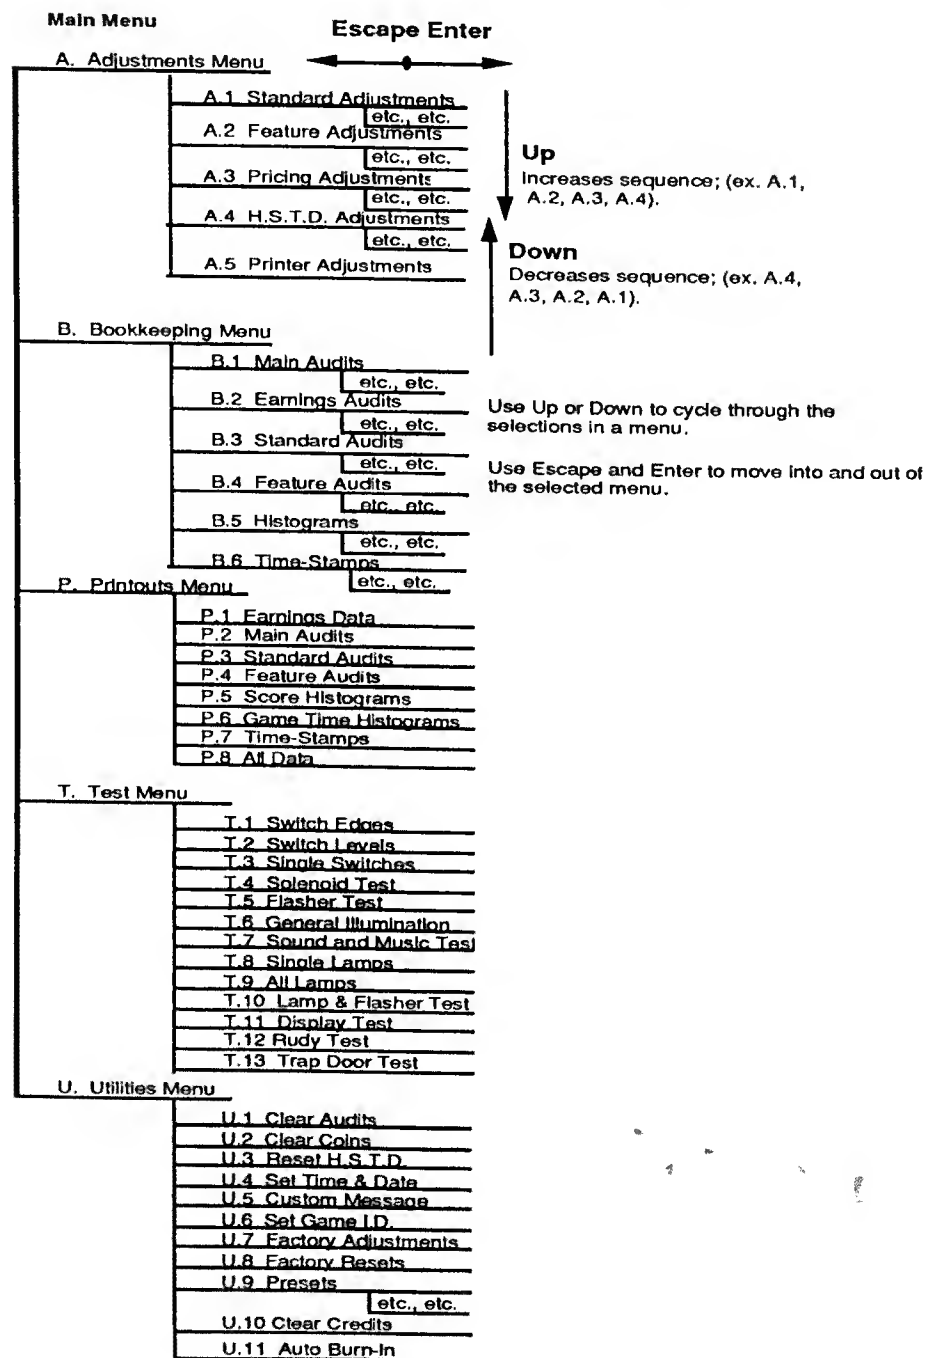

**END OF GAME.** All earned scores and bonuses are awarded. If a player's final score exceeds the specified value, the player receives a designated award for achieving the current highest score. A random digit set\* appears in the Match display. Credit\* may be awarded, when the last two digits of any player's score display (1 through 4) match the random digits of the Match display. Match, high score, and game over sounds are made, as appropriate.

**GAME OVER MODE.** The GAME OVER display shows in the player score displays. Then, the high scores flash on the appropriate player score displays. The game proceeds to the Attract Mode.

\* - operator-adjustable feature

## MENU SYSTEM OPERATION

**FUNHOUSE** operates on a Menu System. The Main Menu allows you to choose from several main categories, which in turn lead to other menus to choose from. To enter the Menu System, open the coin door and press the Begin Test button. The displays show the Game I.D. Mode. Press the Enter button and the Main Menu appears. To cycle through the Main Menu selections press either the Up or Down button. Activate any selection by pressing the Enter button when the desired selection appears in the displays. To return to the Attract Mode while viewing the Main Menu, or to return to a previous menu selection, press the Escape button. Press the Start button for HELP at any time.

## MAIN MENU

- A. Adjustments
- B. Bookkeeping
- P. Printouts (optional board required)
- T. Tests
- U. Utilities

The game Adjustments are the first category available from the Main Menu. Press the Enter button to activate the Adjustments Menu. Press the Up or Down button to cycle through the Adjustment Menu selections. Press the Enter button to activate the desired Adjustment Group when that group appears in the displays.

## A. ADJUSTMENTS MENU

- A.1 Standard Adjustments
- A.2 Feature Adjustments
- A.3 Pricing Adjustments
- A.4 H.S.T.D Adjustments
- A.5 Printer Adjustments (optional board required)

Once you have entered the adjustment group desired, press the Up or Down button to cycle through the available adjustments in that group. When the desired adjustment appears press the Enter button to activate that adjustment. When an adjustment is activated, the setting value begins to flash. Use the Up or Down button to raise or lower the setting value. When the desired value is displayed press Enter to lock in the value. IF you realize you have made an error, press the Escape button while "Saving Adjustment Value" is displayed. The new value is ignored and the original value is retained.

### **A.1 Standard Adjustments**

- A.1 01 **Balls Per Game**  
The operator defines a "game" by specifying the number of balls to be played. The range of this setting is 1 through 10.
- A.1 02 **Tilt Warnings**  
The operator specifies the number of total actuations of the plumb bob mechanism that can occur before the game is "tilted". The range of this setting is 1 through 10.
- A.1 03 **Maximum Extra Balls**  
The operator chooses the number of Extra Balls that a player may accumulate. The range of this setting is 1 through 10 , or "No Extra Ball" (extra ball disabled).
- A.1 04 **Maximum Extra Balls/Ball in Play**  
The operator chooses the number of Extra Balls to be awarded per ball in play. The range of this setting is:
  - OFF - No maximum number of Extra Ball per ball in play.
  - 1-10 - 1 through 10 Extra Balls per ball in play.

- A.1 05    Replay System**  
The operator chooses the replay system to be used. The choices are:

- A.1 08    Replay Levels\***  
The operator chooses the number of replay levels used by the Auto% Replay mode. The range of this setting is 1 through 4. When the operator chooses two replay levels, the second replay level is automatically adjusted to twice the starting replay level value. When three or four replay levels are chosen, their values are automatically adjusted to three or four times the starting replay level value.
- A.1 09    Replay Level 1\*\***  
The operator chooses the value to be used for the first Fixed Replay. The range of this setting is 00 to 25, 000, 000.
- A.1 10    Replay Level 2\*\***  
The operator chooses the value to be used for the second Fixed Replay. The range of this setting is 00 to 25, 000, 000.
- A.1 11    Replay Level 3\*\***  
The operator chooses the value to be used for the third Fixed Replay. The range of this setting is 00 to 25, 000, 000.
- A.1 12    Replay Level 4\*\***  
The operator chooses the value to be used for the fourth Fixed Replay. The range of this setting is 00 to 25, 000, 000.
- A.1 13    Replay Boost**  
The operator chooses if the replay score can be temporarily boosted by the selected amount EACH time the player reaches or exceeds the replay score. This temporary boost is cancelled when Credits=0, when the player inserts another coin, or when Begin Test is pressed. The choices are:
- ON -     Score is boosted between 500, 000 and 5, 000, 000 points.
  - OFF -     The replay score is not boosted.

\*For Auto % Replay. \*\* For Fixed Replay

- A.1 14 Replay Award**  
For either Auto% Replay or Fixed Replay the operator can choose the form of the award automatically provided when the player exceeds any replay level. The choices are:
- Credit - Reaching each Replay level awards credit.
  - Ticket - Reaching each Replay level awards a ticket.
  - Ball - Reaching each Replay level awards an Extra Ball.
  - Audit - Reaching each Replay level awards nothing to the player; it does increase the entry value of the Audit Item(s) maintaining a tally of these awards.
- A.1 15 Special Award**  
The operator can choose the award automatically provided when the player scores a special. The choices are:
- Credit - Scoring a Special awards a Credit.
  - Ticket - Scoring a Special awards a Ticket.
  - Ball - Scoring a Special awards an Extra Ball.
  - Points - Scoring a Special awards 1 Million points.
- A.1 16 Match Award**  
The operator can choose the award automatically provided when the players wins a match. The choices are:
- Credit - Winning a Match awards a Credit.
  - Ticket - Winning a Match awards a Ticket.
- A.1 17 Extra Ball Ticket**  
The operator can choose whether a Ticket is awarded when the player earns an Extra Ball. The choices are:
- YES - The player is awarded a Ticket in addition to an Extra Ball.
  - NO - The player is not awarded a Ticket.
- A.1 18 Maximum Ticket/Player**  
The operator can choose the amount of Tickets each player can earn. The range of this setting is 00 to 100.
- A.1 19 Match Feature**  
The operator can choose the desired percentage for the Match Feature occurring at the end of the game. The range of this setting is:
- OFF - Match Feature is not available.
  - 1-50% - 1% is 'hard'; 50% is 'extremely easy'. During the Match Feature the game selects a random two-digit number at the end of the game and compares each players score for an identical two digits in the rightmost two positions. A matching of these two digits results in award of a Credit or a Ticket.

- A.1 20 **Custom Message**  
The operator chooses if a message is displayed during the Attract Mode.  
The choices are:
- YES - A message is displayed
  - NO - A message is not displayed.

Press the Escape button to return to the Adjustments Menu. Press the Up button to advance to the next desired Adjustments Group, (or press the Down button to return to a previous group). Press the Enter button to activate. Use the Up or Down button to cycle through the available adjustments.

## **A.2 Feature Adjustments**

### **A.2 01 1st Round Start**

The operator selects the time put on the clock at the start of the game, for the 1st Multi-ball sequence. The range of this setting is 3 o' clock through 10 o' clock.

### **A.2 02 Subsequent Start**

The operator selects the time put on the clock for each subsequent Multi-ball sequence. The range of this setting is, 3 o' clock through 10 o' clock.

### **A.2 03 Hallway Timer**

The operator determines the amount of time a player has to achieve the "Hidden Hallway" after Multi-ball has ended. The choices are, Long or Short.

### **A.2 04 Gangway Timer**

The operator determines the length of time the Gangway Lamps blink after the corresponding flipper lanes are hit. The choices are Long or Short.

### **A.2 05 Gangway Start**

The operator chooses the Gangway Lamp that blinks (next one awarded) at the start of a game. The range of this setting is the 75, 000 through 250, 000 Lamp.

### **A.2 06 Gangway Memory**

The operator chooses whether the Gangway value is carried over from ball to ball or reset at ball start. Note, once the Extra Ball is lit from the Gangway feature, the Gangway resets to 75, 000 for each subsequent ball. The choices are:

- YES - The Gangway value is carried over from ball to ball.
- NO - The Gangway value is reset at the start of each ball.

### **A.2 07 Gangway Extra Ball Memory**

The operator chooses whether the Extra Ball Lamp, when lit from the Gangway feature, is carried over from ball to ball or is reset at ball start. The choices are:

- YES - The Extra Ball Lamp is carried over from ball to ball.
- NO - The Extra Ball Lamp is reset at the start of each ball.

### **A.2 08 Mirror Extra Ball Memory**

The operator chooses whether the Extra Ball Lamp, when lit by the Mystery Mirror, is carried over from ball to ball or reset at the start of each ball. The choices are:

- YES - The Extra Ball Lamp is carried over from ball to ball.
- NO - The Extra Ball Lamp is reset at the start of each ball.

### **A.2 09 Steps Extra Ball Memory**

The operator chooses whether the Extra Ball Lamp, when lit from the Steps Feature, is carried over from ball to ball or is reset at ball start. The choices are:

- YES - The Extra Ball Lamp is carried over from ball to ball.
- NO - The Extra Ball Lamp is reset at the start of each ball.

**A.2 18 Disable Trap Door**

The operator chooses whether to stop the opening and closing of the Trap Door. The Loop switch provides Trap Door awards when this is set to Yes.

- YES - Stop the Trap Door from opening and closing.
- NO - Do not stop the Trap Door from opening and closing.

**A.2 19 Disable Steps Gate**

The operator chooses whether the Steps Gate is disabled and the Steps feature not allowed. Should the gate break, balls diverted to the Steps go down the left drain, and a free ball is granted. By setting this feature to Yes, the feature is bypassed thus eliminating free balls. The choices are:

- YES - Disable the Steps Gate.
- NO - Do not disable the Steps Gate.

Press the Up button to advance to the next desired Adjustment Group, (or press the Down button to return to a previous Adjustment Group). Press the Enter button to activate that group. Press the Up or Down button to cycle through the available adjustments in that group.

**A. 3 Pricing Adjustments**

**A.3 01 Game Pricing (if set to custom, then 02 to 09 are available)**

The operator chooses the cost for a game from a selection of Standard pricing or by installing Custom pricing.

**A.3 02 Left Coin Units**

The operator can specify the number of coin units purchased by a coin passing through the left coin chute.

**A.3 03 Center Coin Units**

The operator can specify the number of coin units purchased by a coin passing through the center coin chute.

**A.3 04 Right Coin Units**

The operator can specify the number of coin units purchased by a coin passing through the right coin chute.

**A.3 05 4th Slot Units**

The operator can specify the number of coin units purchased by a coin passing through the fourth coin chute.

**A.3 06 Units/Credits**

The operator can define the number of coin units required to obtain 1 credit. A coin unit counter in the game program totals the number of coin units purchased through all coin chutes prior to each game. If the total number of these coin units exceeds or matches the Unit per Credit value by a multiple (or more, coin units) of the specified Units per Credit value the Credits display shows the proper number of credits. The coin unit counter retains any remaining coin units, until the start of Ball 2; then the coin unit counter is cleared (its contents are zeroed).

- A.3 07 Units/Bonus**  
The operator can specify that additional credits are to be indicated in the credits display, when a certain number of coin units are accumulated.
- A.3 08 Bonus Credits**  
The operator specifies the number of credits that are awarded when the Units/Bonus level is achieved.
- A.3 09 Minimum Units**  
The operator can specify that No credits are to be posted (indicated in the credit display), until the credits unit counter reaches a particular value, by setting this value to 02 (or more).
- A.3 10 Coin Door Type (if set to custom, then 11 to 15 are available)**  
This adjustment is used to pre-set adjustments 11 to 15 based on standard coin doors (U.S.A., German, etc.).
- A.3 11 Collection Text**  
The operator chooses what coin system is used to display the Earning Audits.
- A.3 12 Left Slot Value**  
The operator can specify the monetary value of the left coin chute.
- A.3 13 Center Slot Value**  
The operator can specify the monetary value of the center coin chute.
- A.3 14 Right Slot Value**  
The operator can specify the monetary value of the right coin chute.
- A.3 15 4th Slot Value**  
The operator can specify the monetary value of the 4th coin chute.
- A.3 16 Maximum Credits**  
The operator can specify the maximum number of credits the game can accumulate, either through game play awards or coin purchases. The range of this setting is 5 through 10. Reaching the specified setting prevents the award of any credits.
- A.3 17 Free Play**  
The operator can specify whether a player can operate the game without a coin (free play) or with a coin. The choices are:  
  
NO - A coin is necessary for game play.  
YES - Game play is free; no coin required.
- A.3 18 Hide Coin Audits**  
The operator chooses whether or not to show the coin audits. The choices are:  
  
YES - The coin audits are not displayed.  
NO - The coin audits are displayed.  
HIDE NAMES - The coin audit value is shown but not the audit name.

## A.3 19

## 1 Coin Buy-in

If the game pricing is set to 1 for 50¢/2 for \$1.00 the operator chooses whether the player is allowed to 'buy-in' a subsequent game for 1 coin. The number of games that may be purchased at this cost is determined by the number of players in the previous game; that is, if the previous game had three players, 3 Credits can be purchased at the rate of 1 coin per credit. The choices are:

- YES - The player has 10 seconds to buy-in at 1 coin per game.  
 NO - The buy-in feature is disabled.

### **T.1 Switch Edges**

For all switches, the number on the left indicates the column, the number on the right indicates the row. Example- Switch 23 means 2nd column, 3rd row.

To test the Left and Right Flippers, press the Left or Right Flipper buttons during switch test. The flipper name and switch number should show in the displays. Any other results indicate the system has detected a problem with the flipper circuit.

To activate the Switch Edges Test, from the Test Menu, press the Enter button. The name and number of each switch that is pressed is shown in the displays. If any other switch, or no switch at all is indicated, the system has detected a problem with the switch circuit.

Press Escape to return to the Test Menu. Press the Up button to display the next test, the Switch Levels Test.

### **T.2 Switch Levels**

Once the test name is shown under the Test Menu, press the Enter button. The name and number of each switch that is activated is shown in the displays. This test automatically cycles through all switches that are detected closed.

Press the Escape button to return to the Test Menu. Press the Up button to display the next test, the Single Switch Test.

### T.3 Single Switches

Once the test name is shown under the Test Menu, press the Enter button. The Single Switch Test isolates a particular switch by blocking signals from all other switches. Use the Up or Down buttons to select the switch to be tested. Either Open or Closed appears in the displays to indicate the state of the switch at the present time. When the switch is activated, an "A" appears during the active state. Press the Start button to obtain wire color, connector, and fuse information.

Press the Escape button to return to the Test Menu. Press the Up button to display the next test, the Solenoid Test.

## T.4 Solenoid Test

Once the test name is shown under the Test Menu, press the Enter button. The Solenoid Test has three modes, Repeat, Stop, and Running. Only one solenoid should turn on at a time. The system has detected a problem if, more than one solenoid turns on, a solenoid comes on and stays on, or no solenoid turn on during the Repeat or Running Tests. Press the Start button to see the wire color, driver number, connector and, fuse information of any coil, when that coil is displayed.

- Repeat - This test allows you to stop and pulse a single coil or flashlamp. Once you have entered the Solenoid Test, coil 1 shows in the displays and the corresponding solenoid activates. Press the Up or Down button to cycle through the solenoids, one at a time, manually. The same solenoid pulses until you press the Up or Down button to move to the next one. Either press the Escape button to return to the Test Menu, or press the Enter button to move to the next test mode.
- Stopped- This test allows you to stop the Solenoid Test at any point. Press Enter during the Repeat Test. The Solenoid Test stops. There should not be any solenoids activated while the test is stopped. Either press the Escape button to return to the Test Menu, or the Enter button to move to the next test mode.
- Running - This test allows you to cycle through the solenoids automatically. Press the Enter button during the Stopped Test mode. The displays show you the name and number of the solenoid currently being pulsed.

Either press the Enter button to return to the Repeat Test, or press the Escape button to return to the Test Menu. Once in the Test Menu press, the Up button to display the next test, the Flasher Test.

## T.5 Flasher Test

Once the test name is shown under the Test Menu, press the Enter button. This test allows you to test the flashlamp part of the solenoid circuit exclusively. This test, like the Solenoid Test, has three test modes Repeat, Stop, and Running. During this test, only one flashlamp circuit should turn on at a time. If, more than one flashlamp circuit turns on, or stays on, or no flashlamp circuit turns on at all the system has detected a problem. Press the Start button to see the wire color, driver number, connector, and fuse information of any flashlamp circuit when that circuit appears in the displays.

- Repeat - Press the Enter button to activate this test. The name and number of the first flashlamp circuit shows in the displays and the corresponding bulb(s) flashes. Press the Up or Down button to cycle through all of the flashlamps circuits one at a time, manually. The same flashlamp circuit pulses until you press the Up or Down button to move to the next one. Either, press the Escape button to return to the Test Menu, or press the Enter button to advance to the next test mode.
- Stopped - This test allow you to stop the Flasher Test at any time without losing your place. Press the Enter button during the Repeat Test. The Flasher Test stops. There should not be any flashlamp circuit turned on during this test mode. Either press the Escape button to return to the Test Menu, or press the Enter button to advance to the next test mode.

Running - This test allows you to cycle through the flashlamps automatically. Press the Enter button during the Stopped Test mode. The displays show you the name and number of the flashlamp currently being pulsed, and the corresponding bulb(s) flashes.

Either press the Enter button to return to the Repeat Test or, press the Escape button to return to the Test Menu. Once in the Test Menu, press the Up button to display the next test, the General Illumination Test.

## **T.6 General Illumination**

Once the test name is shown under the Test Menu, press the Enter button. This test allows you to check all of the General Illumination circuits. There are two modes of operation, Stop and Run. To obtain wire color, driver number, connector, and fuse information, press the Start button when the desired General Illumination circuit appears in the displays.

**Stop -** Press the Up or Down buttons to cycle through the General Illumination Test manually. All illumination is tested first, followed by an individual circuit test. The circuit name and number shows in the displays while the corresponding lamps lights. If any other results occur the system has detected an error.

**Run -** Press the Enter button any time during manual testing and the General Illumination Test cycles through automatically. For each circuit shown in the displays the corresponding bulb should light. If any other results occurs the system has detected a problem.

Either press the Enter button to return to Stop Test, or the Escape button to return to the Test Menu. Once in the Test Menu press the Up button to advance to the next test, the Sound and Music Test .

## **T.7 Sound and Music Test**

Once the test name is shown under the Test Menu, press the Enter button. The Sound and Music Test allows you to check the audio circuits. This test has three modes for testing the sound and music circuits, Running, Repeat and Stop.

**Running -** Press the Enter button when Sound and Music Test is displayed. This test steps through a sequence of sounds and music. Pressing the Up or Down button during this portion of the Sound and Music test allows you to advance to a particular sound or tune without having to wait for the program to play all the sounds available in the test. For each name and number that appears in the displays a sound or tune should be heard. Any other results indicates the system has detected a problem.

**Repeat -** Pressing the Enter button at any time during the Running portion of the Sound and Music Test causes the program to stop and repeat a particular sound or tune. The same sound should repeat continuously until the Up or Down button is pressed. Any other results indicates the system has detected a problem.

**Stop -** Press the Enter button at any time during the Repeat test to stop this test altogether. Nothing should be heard. Any other results indicates the system has detected a problem.

Use the Enter button to return to the Run test, or the Escape button to return to the Test Menu. Once in the Test Menu press the Up button to display the next test, the Single Lamp Test.

## **T.8 Single Lamp Test**

For all lamps, the number on the left indicates the column, the number on the right indicates the row. Example- Lamp 23 means 2nd column, 3rd row.

Once the test name is shown under the Test Menu, press the Enter button. This test allows you to test each lamp circuit individually. Press the Up or Down button to cycle through this test. For each name and number that is shown in the displays the corresponding lamp should light. Any other results indicates the system has detected a problem. Press the Start button to obtain wire color, connector, and fuse information when the desired lamp is lit.

Press the Escape button to return to the Test Menu. Press the Up button to display the next test, the All Lamps Test.

## **T.9 All Lamps Test**

Once the test name is shown under the Test Menu, press the Enter button. This test causes all the controlled lamps to flash at the same time. Every controlled lamp should flash. Any other results indicates the system has detected a problem.

Press the Escape button to return to the Test Menu. Press the Up button to display the next test, the Lamp and Flasher Test.

## **T.10 Lamp and Flasher Test**

Once the test name is shown under the Test Menu, press the Enter button. This test causes all the flashlamps and the controlled lamps to flash at the same time. The controlled lamps blink, while the flashlamps cycle from highest to lowest. Any other results indicates the system has detected a problem.

Press the Escape button to return to the Test Menu. Press the Up button to display the next test, the Display Test.

## **T.11 Display Test**

Once the test name is shown under the Test Menu, press the Enter button. This test allows you to cycle through all of the display circuits. Each segment and digit should light in its turn. If a segment or digit never lights, or stays lit all the time, the system has detected a problem. There are two modes for testing the displays, Run and Stop.

Run - Press the Enter button when the Display Test is shown. The test cycles through several phases automatically. Each phase is designed to test either an entire digit or a specific segment.

Stop - Press the Enter button at any time during the Run portion of the Display Test and the test stops. Once the test stops use the Up or Down buttons to cycle through the test manually. Press the Enter button again to resume the running test automatically.

Press the Escape button to return to the Test Menu. Press the Up button to advance to the next test, the Rudy Test.

## **T.12 Rudy Test**

Once the test name is shown under the Test Menu, press the Enter button. This test has three modes of operation and allows you to test all of the solenoids that operate Rudy. Each solenoid should operate in it's turn. If more then one turns On at a time, or stays On, or if nothing turns On during the Run or Repeat test the system has detected a problem. Press the Up or Down button to select the solenoid to be tested.

Repeat - This test allows you to pulse a single solenoid. Press the Up or Down button to cycle through the solenoids one at a time. The same solenoid pulses until you press the Up or Down button to move to the next one. Either press the Escape button to return to the Test Menu, or press the Enter button to move to the next test mode.

Stop - Press the Enter button during the Repeat test and the Rudy Test stops. There should not be any solenoids activated at this point. Either press the Escape button to return to the Test Menu, or press the Enter button to move to the next test mode.

Run - This test allow you to automatically cycle through the solenoids that operate Rudy. Press the Enter button during the Stop test mode. The displays show you the name of the solenoid being activated.

The last item in the Rudy Test is the Run Mouth Test. This test opens and closes the mouth. Press the Enter button to activate.

Press the Escape button to return to the Test Menu. Press the Up button to advance to the next test, the Trap Door Test.

### **T.13 Trap Door Test**

Once the test name is shown under the Test Menu, press the Enter button. This test has three modes of operation. The last character of the top display shows an 'X' when the door is closed.

- Repeat -       The repeat test pulses a single coil, either the up or down coil, until the Up or Down button is pressed to move to the next coil.
- Stop    -       Press the Enter button during the Repeat test and the Trap Door stops activating.
- Run     -       Press the Enter button during the Stop test and the Trap Door cycles Up and Down automatically.

Either press the Enter button to return to the Repeat test mode, or press the Escape button to return to the Test Menu. Then, press the Escape button again to return to the Main Menu. Once in the Main Menu press the Up button to advance to the next menu selection, the Utilities Menu.

Press the Enter button to activate the Utilities Menu, then use the Up or Down button to cycle through the Utilities Menu selections. Press the Enter button to activate the desired individual Utility or Utilities Group when it appears in the displays. If you change a utility setting and realize you have made a mistake, press the Escape button while "Saving New Value" is still in the displays. The original setting is retained and the new setting is ignored.

## PROBLEM ANALYSIS MESSAGES

The WPC game program has a great capability to aid the operator and service personnel: At Game Turn-on (and after pressing the Begin Test switch) once the game has been operating for an extended period, the player score displays may signal with a message, "Press ENTER for Test Report", that the game program has detected a possible problem with the game.

To obtain details of the problem, open the coin door and press the Begin Test switch. Press the Enter button to begin displaying the message(s). The following messages apply to your FUNHOUSE game.

**Check Switch ##.** This message indicates that at least one switch was stuck 'On' at game turn-on or has NOT been actuated during ball play (for 90 balls or ~30 games) by displaying the message "Adjust Switch ##", listing each problem switch by number. (The game program compensates the game play requirements affected by each disabled switch to allow 'nearly normal' play. This helps keep FUNHOUSE earning, until the service technician can repair the problem, bringing the game back to its normal good profits!)

To verify the problem, refer to the Test Menu text describing Switch Testing, and check each reported switch using applicable switch tests. Always check switch operation using a ball, to simulate game conditions. (Switch problems may often be resolved by adjusting the wire switch actuators, fixing switch circuitry problems, securing loose connectors, etc. Mechanisms using 'opto switches' (drop targets, etc.) need to be checked for proper power connections (+12V dc and ground).

**Pinball Missing.** FUNHOUSE normally uses three balls; however, it will operate with one or two balls. This message announces that a ball is missing or stuck somewhere. When the ball is located, return it to the game via the Outhole. Other possibilities for this problem could be malfunctions of the Ball Trough switches or the Ball Shooter switch.

**xxxxx Sw. is Stuck On.** This message indicates that a switch, which is not usually On, remains in the On position after the game is switched on. The stuck switch is essential for game play (for example, a coin chute switch, the slam tilt switch, the plumb bob tilt switch), and should be cleared to permit proper game operation.

**Ground Short Row-N, Wht-xxx.** Frequent appearance of this message requires activation of the Switch Levels Test to locate the switch causing the "WHT-xxx ROW x SHORT" message. Possible 'row short' causes are: 1) Slam Tilt (or other coin door) switch touching the grounded coin door; 2) A *leaf-type*, playfield switch touching a grounded part; 3) Players poking metallic objects (wires, coat hangers, etc.) into the game; 4) Switch cable insulation pierced or damaged allowing bare wire contact with a grounded part; 5) All switches in a row closing at the same time (Note: This instance is NOT a switch problem; however, for most games this is a very rare possibility).

**Factory Settings Restored.** Repeated appearance of this message indicates that the CMOS RAM no longer retains any custom Pricing or Game Adjustment settings and has reverted to factory default settings. Generally, the following CPU checks will isolate the cause of the CMOS RAM memory failure. The voltage at pin 28 of U8 should be +5V (game turned on) and at least +3.8V (game turned off). When the voltage drops below +3.8V, memory reset occurs. Check the batteries and battery holder. Be sure that the batteries are good and that there is no contamination on the battery holder terminals. Turn the game OFF, and use an ohmmeter to check diodes D1 and D2 on the CPU Board. D1 should read 0 ohms when forward-biased and infinite ohms when reverse-biased. D2 should read 15 ohms when forward-biased and infinite ohms when reverse-biased.

**U6 Checksum Error.** The game ROM checksum is invalid. If this occurs replace the game ROM.

**Time and Date Not Set.** The real time clock is not running. If this occurs go to U.4 of the Utilities Menu and set the time and date.

The CPU has three L.E.D.s located on the upper left side of the board. On game power-up the top and bottom L.E.D.s turn On for a moment then, the top L.E.D. turns Off and the center L.E.D. starts to blink rapidly. The bottom L.E.D. remains On. The system has detected a problem if the following happens:

#### **CPU Board L.E.D. Error Codes**

Center L.E.D. blinks one time	-	ROM Error U6
Center L.E.D. blinks two times	-	RAM Error U8
Center L.E.D. blinks three times	-	Custom Chip Failure U9

## **MAINTENANCE INFORMATION**

Regular maintenance is essential to a game's continuing contribution to the operator's earnings.

### **LUBRICATION**

The two main lubrication points of the Ball Shooter Lane Feeder mechanism are the pivots for the arm. Note that the mechanism of other playfield devices are somewhat similar to the Ball Shooter Lane Feeder Device; and have the same lubrication requirements as the Ball Shooter Lane Feeder Device. A medium viscosity oil (20W or 30W) is satisfactory for these devices.

Because of the functional design (arm-actuated via solenoid plunger operation), the pivot points of the Left and Right Kickers ("Slingshots") all require lubrication as a regular servicing procedure.

Lubrication to ensure proper operation also applies to the target blades of the Drop Targets. MBI Instrument Grease, also known as Drop Target Switch Lubricant, with a Williams' part number of 20-8886, is a recommended lubricant.

### **SWITCH CONTACTS**

For proper game operation, switch contacts should be free of dust, dirt, contamination, and corrosion. Blade switch contacts are plated to resist corrosion. Cleaning blade switch contacts requires gentle closing of the contacts on a clean business card or piece of paper, and then pulling the paper about 2 inches, which should restore the clean contact surface. Adjust the switch contacts to a 1/16-inch gap.

### **CLEANING**

Good game action and extended playfield life are the results of regular playfield cleaning. During each collection stop, the playfield glass should be removed and thoroughly cleaned and the playfield should be wiped off with a clean, lint-free cloth. The game balls should be cleaned and inspected for any chips, nicks, or pits. Replace any damaged balls to prevent playfield damage.

Regular, more extensive, playfield cleaning is recommended. However, avoid excessive use of water and caustic or abrasive cleaners because they tend to damage the playfield surface. Playfield wax (or any carnauba based wax), or polish may be used sparingly, to prevent a buildup on the playfield surface. Do not use cleaners containing petroleum distillates on any playfield plastics because they may dissolve the plastic material or damage the artwork.

5768-12714-00	Lamp PCB
24-8767	Twist Lamp Socket
24-8768	Bulb #555, (6.3v, 0.25A.)
5070-09054-00	Diode, 1N4004, 1.0A.
5791-10871-08	Connector, 8-pin Header Sq Post

### A-14094      Clock Lamp Board

Part Number	Description
5768-12715-00	Lamp PCB
24-8767	Twist Lamp Socket
24-8768	Bulb #555, (6.3v, 0.25A.)
5070-09054-00	Diode, 1N4004, 1.0A.
5791-10871-12	Connector, 12-pin Header Sq Post
5010-09534-00	Resistor, 0Ω

### C-13375      Clock Single Lp Board

Part Number	Description
5768-12592-00	Lamp PCB
24-8803	Lamp Socket
24-8802	Bulb #906, (13v, 0.69A.)
5791-10871-02	Connector, 2-pin Header Sq Post

### A-14115      Bill Board

Part Number	Description
5768-12719-00	Lamp PCB
24-8804	Socket V-Wedge PCB
24-8768	Bulb #555, (6.3v, 0.25A.)
5070-09054-00	Diode, 1N4004, 1.0A.
5791-10871-08	Connector, 8-pin Header Sq Post

### A-14280      10-Lamp Board

Part Number	Description
5768-12754-00	Lamp PCB
24-8767	Twist Lamp Socket
24-8768	Bulb #555, (6.3v, 0.25A.)
5070-09054-00	Diode, 1N4004, 1.0A.

1.)	01-8073-L	Flipper Crank, Left

<b>Associated Parts:</b>	20-9250-6	Flipper Arm on Shaft (Yellow)
	23-6519-4	Red Rubber Ring (Red)

### Flipper Assembly Notes...

1. Each Flipper Assembly on the Lower Playfield is mounted beneath the playfield, in conjunction with the plastic Flipper Paddle and Shaft (20-9250-6) and Flipper Rubber (23-6519-4) on the upper side of the playfield.
2. The tip of the EOS Switch must travel 0.150 (+ .010, - .000) inch, before the contacts fully open, with the flipper in the actuated position. The EOS Switch contacts must have a gap of 0.062 ( $\pm$  .015) inch. Adjustment of the EOS Switch must be made at a minimum distance of 0.25 inch from the switch body.
3. All moving elements of the assembly must operate freely, with no evidence of binding.
4. The large end of the Coil Plunger Spring (item 20) must fit within the four lugs of the Solenoid Bracket.
5. For coil replacement, remove the Solenoid Bracket (item 18) to prevent screw damage.
6. Use Loctite™ 242 when reattaching screws to the Flipper Stop Assembly, the Solenoid Bracket, and the Flipper Bushing.
7. When replacing their Bumper Plug (item 22) to restore proper flipper operation, readjust the flipper paddle and shaft position.
8. Solid-color blue wire connects to the banded end of each diode, mounted on the connector end of the Flipper Coil (item 17). Trace-color wire connects to the unbanded end of the diode.

## WARNINGS & NOTICES

### WARNING

**FOR SAFETY AND RELIABILITY**, *WILLIAMS ELECTRONICS GAMES* does not recommend or authorize any substitute parts or modifications of *WILLIAMS'* equipment. Use of Non-*WILLIAMS'* parts, or modifications of game circuitry, may adversely affect game play, or may cause injuries.

**SUBSTITUTE PART OR EQUIPMENT MODIFICATIONS** may void FCC Type Acceptance.

**BECAUSE THIS GAME IS PROTECTED** by Federal copyright, trademark, and patent laws, unauthorized game conversions may be illegal under Federal law.

**THIS 'CONVERSION' PRINCIPLE ALSO APPLIES** to unauthorized facsimiles of *WILLIAMS'* equipment, logos, designs, publications, assemblies, and games (or game features not deemed to be in the public domain), whether manufactured with *WILLIAMS'* components or not.

### WARNING

This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

### WARNING

**FCC STICKER.** Check the back of your **FUNHOUSE** game to verify that an FCC-certification sticker was attached to your game at the factory.

All games that leave *WILLIAMS'* plants have been tested and found to comply with FCC Rules. Because the sticker is proof of this fact, legal repercussions to the owner and distributor of the game may result, if the sticker is missing. If you receive any *WILLIAMS* game, manufactured after December 1982, that has no FCC sticker, call *WILLIAMS* for advice or write us a note on your Game Registration Card. Be sure that the card bears your game's serial number.

### RF Interference Notice

**CABLE HARNESS PLACEMENTS** and ground strap routing on this game have been designed to keep RF radiation and conduction within levels accepted by the FCC Rules.

**TO MAINTAIN THESE LEVELS**, reposition harnesses and reconnect ground straps to their original placements, if they become disconnected during maintenance.
